

LUMINA GOLD CORP.

**MANAGEMENT'S DISCUSSION AND ANALYSIS
FOR THE YEAR ENDED DECEMBER 31, 2019**

TSX-V: LUM

www.luminagold.com

INTRODUCTION

Lumina Gold Corp. ("Lumina" or the "Company") is a resource exploration company with a focus on the exploration and development of the Company's wholly-owned Cangrejos Project, located in the foothills of the Andes in southwest Ecuador (the "Cangrejos Project").

Lumina's head office is in Vancouver, Canada. The Company was incorporated on March 22, 1988. On November 1, 2016, the Company changed its name from Odin Mining and Exploration Ltd. to Lumina Gold Corp. The Company's common shares are listed on the TSX Venture Exchange ("TSXV") under the symbol "LUM".

On July 9, 2018, Lumina announced that its board of directors had unanimously approved a strategic reorganization of its business (the "Arrangement") whereby all of Lumina's concessions and properties, with the exception of the Cangrejos Project, would be spun out to Lumina shareholders through a newly incorporated company, Luminex Resources Corp. ("Luminex"). The reorganization was effected by way of a plan of arrangement under the *Business Corporations Act* (British Columbia), and was approved by the Supreme Court of British Columbia and by the affirmative vote of 99.9% of Lumina's shareholders in attendance at a shareholders' meeting held on August 21, 2018. The effective date of the Arrangement was August 31, 2018. Lumina's shareholders received common shares of Luminex by way of a share exchange, pursuant to which each existing common share of Lumina was exchanged for one "new" common share of Lumina and 0.15 of a common share of Luminex. Option holders of Lumina received replacement options of Lumina and options of Luminex which are proportionate to, and reflective of, the terms of their existing options. The Arrangement had a material impact on Lumina's financial condition, financial performance and cash flows due to the transfer of approximately \$5.4 million in cash to Luminex as well as various mineral concessions including the Condor Project which was previously included on the Company's consolidated balance sheet at \$47,487,910.

This management's discussion and analysis ("MD&A") focuses on significant factors that affected Lumina and its subsidiaries during the relevant reporting period and to the date of this report. The MD&A supplements, but does not form part of, the audited consolidated financial statements of the Company and the notes thereto for the years ended December 31, 2019 and 2018, and, consequently, should be read in conjunction with the aforementioned financial statements and notes thereto.

ADDITIONAL INFORMATION

Additional information about the Company is available under the Company's profile on SEDAR at www.sedar.com and on the Company's website at www.luminagold.com.

The Company reports its financial information in United States dollars and all monetary amounts set forth herein are expressed in U.S. dollars unless specifically stated otherwise. The financial information presented in this MD&A has been prepared in accordance with International Financial Reporting Standards ("IFRS") as issued by the International Accounting Standards Board (the "IASB"). The Company's audited consolidated financial statements for the years ended December 31, 2019 and 2018 were prepared in accordance with IFRS.

Leo Hathaway, P.Geo., is a qualified person as defined by National Instrument 43-101 – *Standards of Disclosure for Mineral Projects* ("NI 43-101") and has reviewed and approved for inclusion the scientific and technical disclosure in this MD&A. Mr. Hathaway is a Senior Vice President of the Company.

FORWARD-LOOKING INFORMATION

Information and statements contained in this MD&A that are not historical facts are forward-looking information or forward-looking statements within the meaning of Canadian securities legislation and the *U.S. Private Securities Litigation Reform Act of 1995* (hereinafter collectively referred to as "forward-looking statements") that involve risks and uncertainties. This MD&A contains forward-looking statements such as estimates and statements that describe the Company's future plans, objectives or goals, including words to the effect that the Company or management expects a stated condition or result to occur. Examples of forward-looking statements in this MD&A include, but are not limited to, statements with respect to:

- the Company's going-forward strategy and plans;
- Lumina's acquisition of concessions, and the regulatory reporting and amount of spending required to maintain the concessions in good standing;
- the Company's plans and activities required to continue or initiate exploration and drilling programs, as well as related initiatives;
- timing of and prospects for future exploration and development work and expenditures on the Cangrejos Project;
- estimates of mineral resources at the Cangrejos Project;
- potential economic recoveries at the Cangrejos Project;
- estimates of future metal prices;
- possible related discoveries or extensions of new mineralization or increases or upgrades to reported mineral resource estimates, and related studies at the Company's Cangrejos Project;
- the potential for the Cangrejos Project to be an economic, large-scale open pit gold and copper mine;

- the upgrading of inferred mineral resources to indicated or measured mineral resources;
- the Company's intention to release an updated Preliminary Economic Assessment ("PEA") by the end of the second quarter of 2020 and that the PEA will include both the Cangrejos and Gran Bestia deposits;
- the potential for an updated mineral resource estimate to support a Pre-Feasibility Study ("PFS") and the detailed work to expand its updated PEA that would be required for a PFS;
- the expected timing, benefits and impacts of the process of unifying certain of the Cangrejos Project concessions into a single mining project in compliance with Ecuadorian legal norms;
- the Company's ability to comply with permitting and regulatory requirements related to exploration and development and related operations, as well as any associated costs and timing;
- the Company's ability to acquire, secure, and maintain access to surface lands needed for its operations, as well as for future mine development;
- the Company's submission of an environmental impact study to the Ecuadorian Ministry of Environment and the ongoing work to secure issuance of an environmental license related thereto;
- the Company's efforts to advance an Investment Agreement with the Government of Ecuador;
- the Company's ability to continue as a going concern;
- the impact of future accounting standards on the Company;
- the adequacy of the Company's working capital;
- the Company's planned use of proceeds from its financing activities;
- the Company's ability to raise additional financing or find alternative ways to advance its corporate objectives, as well as the use of any financing proceeds;
- the Company's efforts to monitor market and economic, political and social conditions (globally and in Ecuador);
- the Company's ability to identify and, with government support, control and terminate incursions by illegal miners into its concessions;
- the Company's ability to manage relations with economic, political and social stakeholders in Ecuador;
- the potential for additional consultation with communities being required;
- the validity of the Government of Ecuador's mineral concession auction processes and the rights granted thereby;
- the mining assets and properties of the Company being and remaining attractive investment opportunities;
- the effects of the COVID-19 virus on Ecuador and the Company's operations and plans;
- the unified Cangrejos Project concession is expected to contain all of the mineralized areas projected for mining development in the 2018 PEA, as well as the Gran Bestia deposit, and that the consolidation will conclude in 2020; and,
- any additional risks and uncertainties with regard to the Company's business.

In certain cases, forward-looking statements can be identified by the use of words such as "plans", "expects" or "does not expect", "is expected", "budget", "goal", "scheduled", "estimates", "forecasts", "intends", "anticipates" or "does not anticipate", or "believes", or variations of such words and phrases or state that certain actions, events or results "may", "could", "would", "might" or "will be taken", "occur" or "be achieved". Any such forward-looking statements are based, in part, on assumptions and factors that may change, thus causing actual results or achievements to differ materially from those expressed or implied by the forward-looking statements. Such factors and assumptions may include, but are not limited to: assumptions concerning gold, copper and other base and precious metal prices; cut-off grades; accuracy of mineral resource estimates and resource modeling; timing and reliability of sampling and assay data; representativeness of mineralization; timing and accuracy of metallurgical test work; anticipated political and social conditions; expected Ecuador national, provincial and local government policies, including legal reforms; and, ability to successfully raise additional capital.

Forward-looking statements involve known and unknown risks, uncertainties and other factors which may cause the actual results, performance or achievements of the Company to be materially different from any future results, performance or achievements expressed or implied by the forward-looking statements. Such risks and other factors include, among others, and without limitation:

- risks relating to the impacts of epidemics and pandemics, including COVID-19, internationally, nationally across Ecuador, and locally;
- risks relating to price fluctuations of gold, copper, and other precious and base metals;
- risks inherent in mineral resource estimation;
- risks relating to the Company's sole project being located in Ecuador, including political, social, economic, security and regulatory instability;
- risks relating to government expropriation or cancellation of the Company's mineral property interests;
- risks relating to geological and engineering assumptions (including with respect to the tonnage, grade and recoverability of mineral reserves and resources) in the PEA for the Cangrejos Project;
- risks relating to the estimated cost and timing of a PFS or other studies;
- risks relating to the Company having a single project asset;
- risks relating to changes in Ecuador's national, provincial and local political leadership, including impacts these may have on general, environmental and mining specific public policies, laws, regulations, and other norms or decisions issued by administrative agencies or provincial or local government bodies, as well as legal, political and social stability;

- risks relating to governmental initiatives including: austerity measures; reorganization and restructuring, including consolidation of ministries and agencies; changes in leadership at different regulatory and other government bodies, including the Ministry of Energy and Non-Renewable Natural Resources, Ministry of Environment, and the Agency for Mining Regulation and Control (ARCOM); and, staffing reductions;
- risks relating to national, provincial and local political and social activism or unrest, including opposition to mining, concerns about the environment and water, pressure for economic benefits such as employment or social investment programs, access to land for agricultural or artisanal mining use, or for illegal mining or other unlawful purposes, or other demands;
- risks relating to required consultations with communities;
- risks relating to the political, social, environmental and geological conditions in areas in proximity to the concessions under development;
- risks relating to Lumina's rights or activities being impacted by litigation or administrative processes;
- risks relating to Lumina's ability to access concession surface areas and other properties needed to advance its exploration and development programs;
- risks relating to Lumina's operations being subject to environmental requirements, including remediation;
- risks relating to Lumina's ability to prevent or evict illegal mining on its concessions, with or without support from national, provincial and local authorities;
- risk relating to Lumina's ability to safely operate in challenging terrain, habitats, and climates, which can present dangers to worker health and safety;
- risks relating to Lumina's ability to source qualified human resources, including managers, employees, consultants, attorneys, and sub-contractors, as well as the performances of all such resources (including human error and actions outside of the control of Lumina, such as wilful negligence, including on the part of its counterparties or agents);
- risks of title disputes or claims affecting mining concessions or surface ownership rights;
- risks relating to adverse changes to laws, regulations or other norms placing increased regulatory burdens or extending timelines for regulatory approval processes, including environmental, safety, social, taxation and other matters;
- risks relating to delays in obtaining governmental approvals or permits necessary for the execution of exploration, development or construction activities;
- risks relating to failure of plant, equipment or processes to operate as anticipated;
- risks relating to performance of human resources, such as accidents and labour disputes;
- risks relating to competition inherent in the mining exploration industry, in Ecuador and elsewhere;
- risks of impacts from unpredictable natural occurrences, such as epidemics or pandemics, adverse weather conditions, fire, natural erosion, landslides, and geological activity, including earthquakes and volcanic activity;
- risks relating to inadequate insurance or inability to obtain insurance;
- risks relating to the fact that Lumina's properties are not yet in commercial production;
- risks relating to the Company's ability to obtain necessary funding for its operations, at all or on terms acceptable to the Company;
- risks relating to the Company's working capital and requirements for additional capital;
- risks relating to currency exchange fluctuations or change of national currency;
- risks relating to fluctuations in interest and inflation rates;
- risks relating to restrictions on access to and movement of capital;
- risks relating to the PEA proving to be inaccurate in any material respect, including new technical and engineering information and data obtained subsequent to the PEA;
- risks relating to the Company's ability to implement the recommendations contained in the PEA for the Cangrejos Project;
- risks relating to the value of the Company's common shares fluctuating based on market factors, including volatility, or political risk sentiments;
- risks relating to the Company's dependence on key personnel; and
- other risks of the mining industry,

as well as those factors discussed in the sections entitled "Risks and Uncertainties" in this MD&A.

Although the Company has attempted to identify important factors and risks that could affect the Company and might cause actual actions, events or results to differ, perhaps materially, from those described in forward-looking statements, there may be other factors and risks that cause actions, events or results not to occur as projected, estimated or intended. There can be no assurance that forward-looking statements will prove to be accurate, as actual results and future events could differ materially from those anticipated in such statements. Accordingly, readers should not place undue reliance on forward-looking statements. The forward-looking statements in this MD&A speak only as of the date hereof. The Company does not undertake any obligation to release publicly any revisions to these forward-looking statements to reflect events or circumstances after the date hereof or to reflect the occurrence of unanticipated events, except as required by law.

Forward-looking statements and other information contained herein, including general expectations concerning the mining industry, are based on estimates and forecasts prepared by the Company employing data from publicly available industry sources,

as well as from market research and industry analysis, and on assumptions based on data and knowledge of the industry and the operating environment in Ecuador which the Company believes to be reasonable. Although generally indicative of relative market positions, market shares and performance characteristics, this data is inherently imprecise. While the Company is not aware of any misstatements regarding any data presented herein, the mining industry involves risks and uncertainties and the data is subject to change based on various factors.

OVERVIEW OF SIGNIFICANT EVENTS AND REVIEW OF ACTIVITIES

In order to better understand the Company's financial results, it is important to gain an appreciation of the significant events, transactions and activities involving mineral property interests that occurred during the year ended December 31, 2019 and to the date of this MD&A. This overview should be read in conjunction with the remainder of this MD&A to more fully appreciate the Company's results and activities for the year ended December 31, 2019.

Cangrejos Project

Lumina holds the Cangrejos Project, a discovery of both high-tonnage, low-grade, gold-copper mineralization in a porphyry environment and of lower-tonnage, higher-grade, gold-copper mineralization in structurally focused settings above and peripheral to the porphyry mineralization. The Cangrejos Project is located in the foothills of the Andes in the southwest of Ecuador and lies 30 kilometres ("km") southeast of Machala, the capital of El Oro Province, and 150 km south of Guayaquil, Ecuador's largest city. It also benefits from close proximity to the port of Puerto Bolivar (located near Machala), located approximately 40 km away.

The Cangrejos Project consists of ten mineral concessions covering a total area of 6,373 hectares. It previously consisted of six mineral concessions, but the Company has subdivided certain areas prior to seeking to amalgamate the core concessions with a view to better facilitating future development. Within the area of the concessions, Lumina currently owns or controls approximately 1,512 hectares of land / surface rights over various important locations with respect to the known and potential targets, including approximately 360 hectares granted by way of government easement on the concession known as Cangrejos 20 ("C20") and approximately 480 hectares of land that were acquired in November 2019 consisting of approximately 400 hectares for possible facility siting and 80 hectares to the north of the Gran Bestia deposit where the deposit remains open.

Lumina resumed drilling at the Cangrejos Project on February 20, 2018, and, through to September 12, 2019, drilled 95 holes for 39,684 metres, including six metallurgical holes (two twin holes and four large diameter PQ holes) totalling 847 metres and sixteen geotechnical holes for 4,536 metres. From the start of 2019 to September 12, 2019, the Company completed a total of 24,916 metres in 61 holes. This work included 23 infill and step-out holes on the western portion of the Cangrejos deposit (in the C20 concession), 23 exploration holes at the Gran Bestia deposit (part of the C20 concession), three large diameter (PQ Core) holes in support of the Company's metallurgical testing program, and twelve holes for geotechnical and hydrogeologic characterization for development of pit slope design.

Following the completion of drilling at the Cangrejos Project, on November 7, 2019, Lumina announced an updated mineral resource estimate which reflects the Cangrejos deposit and a maiden mineral resource estimate at Gran Bestia. Highlights of the updated mineral resource estimate include:

- Cangrejos deposit: 8.9 million ounces contained gold and 1.2 billion pounds contained copper in indicated mineral resource (469 million tonnes of indicated mineral resource with an average grade of 0.59 g/t gold and 0.12% copper) and 3.5 million ounces contained gold and 466 million pounds contained copper in inferred mineral resource (255 million tonnes of inferred mineral resource with an average grade of 0.43 g/t gold and 0.08% copper); and
- Gran Bestia Deposit: 1.5 million ounces of contained gold in indicated mineral resource and 2.7 million ounces of contained gold in inferred mineral resource (99 million tonnes of indicated mineral resource with an average grade of 0.46 g/t gold and 0.08% copper; 221 million tonnes of inferred mineral resource with an average grade of 0.39 g/t gold and 0.07% copper) and 178 million pounds of contained copper in indicated mineral resource and 322 million pounds of contained copper in inferred mineral resource.

All highlights above are calculated using the base case cut-off grade of 0.30 grams per tonne gold equivalent ("AuEq"). For further details, please view the Company's news release of November 7, 2019 titled "Lumina Gold Dramatically Increases the Cangrejos Resource: 10.4 Million Ounces in Indicated Mineral Resource and 6.3 Million Ounces Gold in Inferred Mineral Resource" or view the NI 43-101 technical report detailing the mineral resource estimate for the Cangrejos Project titled "Cangrejos Gold-Copper Project, Ecuador – NI 43-101 Technical Report" which was completed and filed on December 12, 2019, both of which can be found at the Company's website (www.luminagold.com) or on the Company's profile on SEDAR.

In addition, during the year ended December 31, 2019 and to the date of this MD&A, Lumina has continued to carry out various studies that would support a future PFS or the currently planned updated PEA (as discussed in more detail in the "Outlook" section) including:

- Development of an initial mine plan and schedule. Work on detailed plans, designs and equipment selection are in progress at the date of this MD&A;
- completion of a LIDAR survey from which a high accuracy site specific topographic and land use map was developed to support the mineral resources estimate and an updated PEA project design;
- completion of a ZTEM geophysical survey (in February / March 2020) comprising approximately 368 line-kilometres at spacing of 200 metres over the southwestern part of the Cangrejos Project area and 400 metres in the northeastern areas. Interpretation of results is ongoing and will be used to identify areas for potential future exploration and drilling activity;
- geotechnical drilling, rock mechanics testing and characterization including televiwer and acoustic downhole surveys were completed to support pit slope design as part of mine plan development;
- completion of hydrogeologic testing of select geotechnical and metallurgical drill holes, including installation of monitoring wells and piezometers in support of pump testing for hydrogeologic characterization and groundwater modeling of the PEA pit in support of pit slope design and site wide water balance modeling;
- surface water characterization at various locations;
- metallurgical testing and optimization program in support of flowsheet development and process plant design and layout. Work completed included initial Gran Bestia metallurgy and further variability tests on the Cangrejos Project (see the Company's news release dated September 23, 2019);
- completion of a process trade-off study that compared high pressure grinding roll (HPGR) flotation and CIP flowsheet versus conventional SAG and ball mill, gravity and flotation circuit of the PEA. The proposed updated PEA will include the HPGR and ball mill, gravity and flotation and CIP flowsheet;
- acid rock drainage studies of pit, waste rock and tailings to support the updated PEA have been completed and long-term field studies are ongoing;
- evaluation of plant site and sitewide infrastructure, including geotechnical characteristics of key sites has been completed in support of the updated PEA;
- waste rock and tailings storage options including site geotechnical characterization of select sites for foundation designs has been completed to support the updated PEA and preferred tailings and waste rock storage facilities have been selected;
- implementation of key ongoing components of the project, including environmental monitoring and social programs; and
- development of initial estimation of project capital and operating costs is underway for inclusion in a project cashflow model once completed.

In September 2017, the Company submitted an environmental impact study ("EIS") application to the Ecuadorian Ministry of Environment ("MAE") for its Cangrejos 20 concession, which (under the rules at that time, prior to the introduction in Ecuador of the scout drilling regime) had to be approved before the advanced exploration phase, including infill and step-out drilling, could commence at C20. The MAE submitted a formal response in August 2019 issuing some observations to the EIS presented. Follow-up discussions with MAE officials have led to the Company modifying its original submission as the Company's exploration requirements and objectives as originally submitted have already been achieved using the scout drilling process. The Company has submitted a revised EIS, which is undergoing MAE review prior to eventual approval.

Financing Activity

On November 29, 2017, the Company completed a brokered private placement of 32,258,064 common shares at a price of CAD\$0.62 per common share, for aggregate gross proceeds of approximately CAD\$20,000,000 (\$15,560,569). The proceeds of the private placement were to be used to explore and advance the Company's projects in Ecuador and for general corporate purposes. The Company incurred \$803,501 in share issue costs which included finder's fees of up to 6% of the proceeds from certain subscribers. As of March 31, 2019, the Company had fully expended these funds for exploration and advancement of the Company's projects in Ecuador and for general corporate purposes.

On July 26, 2018, the Company completed a non-brokered private placement of 9,730,000 common shares at a price of CAD\$0.72 per common share, for aggregate gross proceeds of approximately CAD\$7,000,000 (\$5,362,113). The proceeds of the private placement were to be used to fund working capital for the Luminex spin-out and for general corporate purposes. The Company incurred \$150,834 in share issue costs which included \$101,731 in finder's fees of up to 4% of the proceeds from certain subscribers. \$5,250,000 was transferred to Luminex prior to the completion of the Arrangement and the remainder was used for general corporate purposes.

On November 27, 2018, the Company completed a short form prospectus offering of 19,320,000 common shares at a price of CAD\$0.56 per common share and a non-brokered private placement of 16,400,000 common shares at a price of CAD\$0.56 per common share for aggregate gross proceeds of approximately CAD\$20,000,000 (\$15,052,449). The proceeds of these financings were to be used to fund infill and step-out, geotechnical, hydrology and metallurgical drilling; environmental, permitting and social programs, updating the mineral resource estimate for the Cangrejos Project; and for working capital and general corporate purposes. The Company incurred \$776,460 in share issue costs which included a 6% agents' commissions of \$488,488 and a 4% finder's fee totaling \$30,105. As at December 31, 2019, the Company had expended all the cash raised from this financing activity to support its ongoing exploration efforts at the Cangrejos Project and for general corporate matters. Details on the expenditures from these financings can be seen in the audited consolidated financial statements of the Company for the year ended December 31, 2019 and notably in Note 7(b) re exploration and evaluation expenditures.

On December 18, 2019, the Company completed a non-brokered private placement of 18,004,000 common shares at a price of CAD\$0.50 per common share for aggregate gross proceeds of approximately CAD\$9,002,000 (\$6,861,802). The proceeds of the private placement are to be used to fund study work at the Cangrejos Project and for general corporate purposes. The Company incurred \$133,417 in share issue costs which included \$84,823 in finder's fees of up to 4% of the proceeds from certain subscribers. Approximately \$0.5 million of these funds were expended as at December 31, 2019.

OUTLOOK

As discussed earlier in this MD&A, the Company has announced an updated mineral resource estimate for the Cangrejos Project which supports the Company's decision to proceed with an updated Cangrejos Project PEA which will include both the Cangrejos and Gran Bestia deposits. The August 10, 2018 PEA included only the Cangrejos deposit, whereas the subsequent 2019 drilling program at both deposits identified additional mineral resources, which have allowed the Company to define a larger project that includes both the Cangrejos and Gran Bestia deposits. The updated PEA is scheduled to be completed by the end of the second quarter of 2020. Detailed work to expand on the 2018 PEA design and findings that are complete or well advanced includes: completion of a mineral resource for the Cangrejos and Gran Bestia deposits, mine geotechnical characterization for pit slope design, mine design and planning, metallurgical testing to support flow sheet definition and process plant design, site characterization and design of infrastructure, power supply, access roads, tailings and waste rock storage facilities, hydrology/hydrogeology studies, and environmental and social studies to support project permitting, community and environmental programs. In addition, marketing/transport studies and engineering are ongoing. These studies along with the completed studies, engineering and designs will support capital and operating cost estimates which have been initiated. Once this work is completed, an updated PEA project cashflow model will be completed.

The 2018 PEA cost estimate for completion of a PFS was \$12.8 million. Although the Company has not yet elected to complete a full PFS, it is currently actively completing fieldwork and studies as part of the updated 2020 PEA that will support portions of a PFS, should the Company elect to undertake a PFS in the future.

In parallel, the Company is working with the Government of Ecuador to advance an Investment Agreement that will define the scope of the rights and guarantees of the Company for the Cangrejos Project during the exploration stage. Once a PFS has been completed at the Cangrejos Project (should the Company elect to complete one), the Company can work with the Government of Ecuador to define the fiscal terms that will govern future operations of the project.

The Company is implementing a process to consolidate the key areas of the Cangrejos Project's mineral rights into a single unified mineral concession. This is necessary to enable effective negotiations with governmental authorities, as well as more efficient permitting and processing of the many necessary requirements that will arise as the Company advances the Cangrejos Project's development. The unified concession is expected to contain all of the mineralized areas projected for mining development in the 2018 PEA, as well as the Gran Bestia deposit. This process involves several steps and the Company is working with Ecuadorian legal counsel to conclude the consolidation in 2020. However, timing for completion of the process is dependent on administrative approvals.

Ecuador has not been spared by the advent of the COVID-19 virus. At this time, the nation is under a 60-day State of Exception, commencing March 16, 2020, which could be extended depending on the nation's success at containing the spread of the virus. Current response measures include, but are not limited to, an almost total prohibition on international flights and border crossings, heavy restrictions on domestic travel, a mandate that the employees of all but a few select strategic industries and necessary sectors (e.g., hospitals, pharmacies and supermarkets) work from home, and a nightly curfew.

The Company has taken measures to protect the health and safety of its employees, in compliance with the Government of Ecuador's norms and recommendations of the World Health Organization (WHO), while also taking into account the realities on the ground and concerns of employees and local communities.

SELECTED ANNUAL FINANCIAL INFORMATION

The following summary financial information has been derived from the financial statements of the Company, which have been prepared in accordance with IFRS. The Company's significant accounting policies are outlined in Note 3 to the audited consolidated financial statements of the Company for the fiscal years ended December 31, 2019 and 2018.

	Year Ended December 31,		
	2019	2018	2017
Consolidated Statements of Comprehensive Loss			
Revenue	\$ -	\$ -	\$ -
Expenses	(16,804,682)	(15,953,261)	(13,602,515)
Loss on spinout of Luminex Resources Corp.	-	(12,536,695)	-
Other income	459,537	1,022,865	203,090

A review of the results of operations for the years ended December 31, 2019 and 2018 is presented below in the "Review of Financial Results" section of this MD&A. The Company's operations and levels of expenditure vary from year to year as exploration activity is carried out or curtailed. During 2017, the Company was actively advancing its numerous projects including drilling on the Cangrejos Project and the Condor Project (spun-out to Luminex in 2018) and performing reconnaissance studies on its new concessions that were awarded by government tender process and which were also spun-out to Luminex. There was also a significant increase in headcount in Ecuador to manage and work on the expanded projects. During 2018, the Company completed a PEA on the Cangrejos Project and also continued its drilling program on the project. The Company also incurred significant costs relating to the spin-out of Luminex which closed on August 31, 2018. For the year ended December 31, 2019, the Company continued to drill and explore the Cangrejos Project, as described earlier in this MD&A, which resulted in the publication of an updated mineral resource estimate which will form the basis for the Company's updated PEA in the first half of 2020.

REVIEW OF FINANCIAL RESULTS

This review of the results of operations should be read in conjunction with the audited consolidated financial statements of the Company for the years ended December 31, 2019 and 2018 along with other public disclosure documents of the Company.

For the year ended December 31, 2019, the Company reported a net loss of \$16,345,145 compared to a net loss of \$27,467,091 for the year ended December 31, 2018. The overall decrease in net loss arose primarily due to (i) a loss on spinout of assets to Luminex in 2018, (ii) 2018 professional fees associated with the Arrangement, and (iii) a foreign exchange gain of \$413,313 for the year ended December 31, 2019, all of which were partially offset by increased exploration and evaluation expenditures in 2019.

Exploration and Evaluation Assets (Mineral Properties)

The Company capitalizes costs incurred acquiring exploration and evaluation assets (mineral projects) and any required licenses related thereto with a term of more than one year. At December 31, 2019, the carrying value of the exploration and evaluation asset related to the Cangrejos Project was \$1,701,100 (December 31, 2018 - \$1,701,100).

Exploration and evaluation ("E&E") expenditures are expensed to profit and loss as incurred. These are discussed below and are disclosed in Note 7(b) of the audited consolidated financial statements for the year ended December 31, 2019.

Expenses

Exploration and evaluation expenditures

Total E&E expenses for the year ended December 31, 2019 were \$14,197,279 compared to \$12,290,231 for the year ended December 31, 2018. Further details on the Company's E&E expenses, by project, are provided below.

Cangrejos Project

The Company's E&E expenditures on the Cangrejos Project were as follows for the years ended December 31, 2019 and 2018:

	Year ended December 31,		Increased (decreased)
	2019	2018	Expenditure
Assays / Sampling	\$ 620,077	\$ 270,370	\$ 349,707
Camp	808,595	437,550	371,045
Camp access and improvements	269,047	72,367	196,680
Drilling	5,468,742	2,834,225	2,634,517
Engineering	1,143,163	522,991	620,172
Environmental, Health & Safety	484,212	208,232	275,980
Field office	780,067	396,043	384,024
Geological consulting	675,944	630,245	45,699
Geological and field staff	281,702	366,403	(84,701)
Legal fees	131,626	179,469	(47,843)
Metallurgical	501,195	163,028	338,167
Mineral rights and property fees	328,442	114,679	213,763
Project management	701,411	1,030,913	(329,502)
Reports	391,414	149,993	241,421
Social and community	527,073	397,823	129,250
Share-based payment	495,574	322,098	173,476
Transportation and accommodation	571,616	359,704	211,912
	\$ 14,179,900	\$ 8,456,133	\$ 5,723,767

E&E expenditures on the Cangrejos Project include non-cash expenses for share-based payment expense relating to the vesting of stock options granted under the Company's stock option plan of \$495,574 for the year ended December 31, 2019 compared to \$322,098 for the year ended December 31, 2018. Excluding share-based payment expense, the overall increase in E&E expenditures for the year ended December 31, 2019 compared to 2018 is \$5,550,291. The increase in expenditures reflects the Company's overall level of activity at the Cangrejos Project in 2019, in particular with regard to drilling and directly related assay costs as well as work associated with an updated PEA, such as engineering and metallurgical studies.

Other Projects (now held by Luminex except for Yawi)

The Company's expenditures on Yawi for the year ended December 31, 2019 were \$17,379 compared to \$27,730 for the year ended December 31, 2018. The majority of these costs represented annual concession fees. In June 2019, the Company completed the process to renounce the Yawi concession.

The Company's other E&E expenditures for the year ended December 31, 2018 on the projects which were transferred to Luminex totalled \$3,806,368. There were no expenditures on any of these projects subsequent to August 31, 2018.

Other operating expenses

The Company's other operating expenses for the years ended December 31, 2019 and 2018 were as follows:

	Year ended December 31,		Increased (decreased)
	2019	2018	Expenditure
Fees, salaries and other employee benefits	\$ 2,031,756	\$ 1,916,626	\$ 115,130
General and administration ("G&A")	380,221	645,275	(265,054)
Professional fees	165,250	1,062,832	(897,582)
Insurance	30,176	38,297	(8,121)
	\$ 2,607,403	\$ 3,663,030	\$ (1,055,627)

Fees, salaries and other employee benefits for the year ended December 31, 2019 include \$1,045,703 of share-based payment expense (2018 - \$874,430). Excluding this non-cash expense, fees, salaries and other employee benefits for the year ended December 31, 2019 was \$986,053 compared to \$1,042,196 for the year ended December 31, 2018, which is broadly consistent for the periods under review in line with the relatively stable level of personnel in the Company. The decrease in G&A costs arose primarily as a result of the spin-out of Luminex whereby certain overhead costs are now split between the two companies which was not the case for most of the year ended December 31, 2018. Professional fees decreased by \$897,582 for the year ended December 31, 2019 compared to 2018 primarily as a result of additional legal fees incurred relating to the Arrangement in 2018.

Other income / expenses

The Company's other income / expenses for the years ended December 31, 2019 and 2018 were as follows:

	Year ended December 31,	
	2019	2018
Loss on spinout of Luminex	\$ -	\$ (12,536,695)
Interest income and other:		
First Quantum signing bonus	-	100,000
First Quantum services agreement	-	105,417
Anglo American fee	-	1,300,000
Interest – bank / environmental deposits	42,253	16,938
Other income	12,189	125
Interest expense	(8,218)	-
Foreign exchange gain (loss)	413,313	(499,615)
	\$ 459,537	\$ (11,513,830)

As a result of the spinout of Luminex, the Company recorded a loss on spinout of \$12,536,695 (see note 8 to the audited consolidated financial statements of the Company for the year ended December 31, 2019). The Company received other income in the year ended December 31, 2018 pertaining primarily to fees received from First Quantum Minerals Ltd. (\$100,000 for signing an earn-in agreement and \$105,417 for acting as manager of the earn-in) and Anglo American plc (\$1,300,000) which related to earn-in agreements on properties that were spun-out to Luminex in August 2018. Further details can be seen at Note 7(a) to the audited consolidated financial statements of the Company for the year ended December 31, 2019. For the year ended December 31, 2019, the Company recorded a foreign exchange gain primarily as a result of Canadian dollars on hand following the Company's November 2018 equity financings for which funds were received in Canadian dollars. Subsequent to December 31, 2018, the Canadian dollar strengthened such that management was able to purchase U.S. dollars at a more favorable rate to offset the prior weakening of the Canadian dollar in late 2018.

Related Party Transactions

The Company incurred the following expenses with related parties:

Company	Nature of transactions	Year ended December 31,	
		2019	2018
Miedzi Copper Corp.	E&E (geological)	\$ 122,821	\$ 77,839
Miedzi Copper Corp.	G&A	48,821	105,272
Miedzi Copper Corp.	Fees	271,992	446,861
Mozow Copper Sp. z o. o. ("Mozow")	E&E (field office)	-	2,244
Hathaway Consulting Ltd.	Fees	133,226	158,792
Into the Blue Management Inc.	Fees	122,231	-
Koval Management, Inc.	Fees	232,635	230,355
La Mar Consulting Inc.	E&E (social and community)	191,794	185,871
Luminex Services Ecuador LS- EC S.A. ("Luminex Services")	E&E (geological; social and community; and field office)	413,952	103,285
Lyle E Braaten Law Corp.	Fees	100,026	105,210
Proyectmin S.A. ⁽¹⁾	E&E (field office)	-	3,173
Strategic Resources Inc.	G&A	12,175	-
Zen Capital & Mergers Ltd.	Fees	-	2,291
		\$ 1,649,673	\$ 1,421,493

⁽¹⁾ Proyectmin S.A. was acquired on April 18, 2018. As a wholly-owned subsidiary of the Company, it was no longer considered a related party as intercompany transactions and balances are eliminated on consolidation. Proyectmin S.A. was transferred to Luminex as part of the Arrangement on August 31, 2018, at which time it is once more considered a related party.

Miedzi Copper Corp. is considered a company related by way of directors and shareholders in common. Mozow is a wholly owned subsidiary of Miedzi Copper Corp. Hathaway Consulting Ltd, Into the Blue Management Inc., Koval Management, Inc., La Mar Consulting Inc., Lyle E Braaten Law Corp. and Zen Capital & Mergers Ltd. are related by way of being owned by directors or officers of the Company. Luminex Services is a wholly-owned subsidiary of Luminex and provides personnel services to Odin Mining del Ecuador S.A. ("Odin"). Related party transactions are recognized at the amounts agreed between the parties. Outstanding balances are unsecured and settlement occurs in cash. At December 31, 2019, there were no amounts owing to related parties (2018 - \$Nil).

Included in accounts receivable at December 31, 2019 was \$695 due from Luminex relating to reimbursement of expenses and \$250 due from Southern Ecuador SN-EC S.A. (a subsidiary of Luminex), relating to an overpayment by Odin of fees due on the transfer of legal title to a mineral concession in Ecuador pursuant to the Arrangement.

Included in accounts payable and accrued liabilities at December 31, 2019 are \$5,442 owing from Odin to Condormining S.A. (a subsidiary of Luminex) and \$715 from Odin to Proyectmin S.A. related to transfer of personnel between the entities.

SUMMARY OF QUARTERLY RESULTS (UNAUDITED) AND FOURTH QUARTER

The information presented below highlights the Company's unaudited quarterly results for the past eight quarters.

Three Months Ended:	December 31, 2019	September 30, 2019	June 30, 2019	March 31, 2019
Revenue	\$ -	\$ -	\$ -	\$ -
Expenses	(3,481,986)	(4,468,308)	(5,127,979)	(3,726,409)
Other income (expenses)	17,411	(23,402)	68,246	397,282
Net loss for the period	(3,464,575)	(4,491,710)	(5,059,733)	(3,329,127)
Net loss for the period attributable to owners of the Company	(3,464,575)	(4,491,710)	(5,059,733)	(3,329,127)
Basic and diluted loss per share attributable to owners of the Company	(0.01)	(0.015)	(0.02)	(0.01)

Three Months Ended:	December 31, 2018	September 30, 2018	June 30, 2018	March 31, 2018
Revenue	\$ -	\$ -	\$ -	\$ -
Expenses	(3,518,797)	(3,144,164)	(4,136,773)	(5,153,527)
Other (expenses) income	(360,119)	(11,179,184)	137,067	(111,594)
Net loss for the period	(3,878,916)	(14,323,348)	(3,999,706)	(5,265,121)
Net loss for the period attributable to owners of the Company	(3,878,916)	(12,576,753)	(3,952,727)	(5,175,143)
Basic and diluted loss per share attributable to owners of the Company	(0.01)	(0.05)	(0.01)	(0.02)

The Company's quarterly results reflect the ongoing exploration and evaluation efforts made in 2018 and 2019. In 2018, prior to the spin-out of Luminex, the Company was advancing multiple projects including the Condor Project and new projects from the Government of Ecuador's tender process. Activity levels during the three months ended March 31, 2018, included exploration work and significantly, PEA work on the Cangrejos Project and also the payment of annual mineral concession fees in Ecuador for the 2018 fiscal year. The results for the three months ended June 30, 2018 are after recording cost recoveries and other income from First Quantum (total of \$1,162,790). After adjusting for these recoveries, the overall expenditures in the three months ended June 30, 2018 are broadly consistent with the prior quarter, reflecting completion of the PEA, ongoing work programs on the Company's various projects and also the additional legal fees incurred in the process to spin-out Luminex. Expenses in the three months ended September 30, 2018, were lower than the previous quarters as a result of the following factors: (i) the PEA for the Cangrejos Project was completed so costs decreased and (ii) exploration expenditures for the period only include two months of activity for the concessions that were included in the assets spun-out to Luminex. Other income / expenses for the three months ended September 30, 2018 were impacted by two significant one-time events: (i) a loss of \$12,536,695 on the spinout of assets to Luminex and (ii) income of \$1.3 million from Anglo American relating to the Anglo Agreement (as described earlier in this MD&A). The Company continued exploration work on its Cangrejos Project in the three months ended December 31, 2018 with the increase in expenses attributable to year-end bonuses and share-based payment expense related to stock option grants in December 2018.

For the three months ended March 31, 2019, the Company's expenses increased from the previous quarter as a result of the ongoing drilling program at the Cangrejos Project along with the other exploration activities being performed. This work continued in the three months ended June 30, 2019 and the drilling program was expanded to four drill rigs during this period along with other work as described earlier in this MD&A in the section "Overview of Significant Events and Review of Activities," which included completion of a LIDAR survey, geotechnical and metallurgical drilling and instrumentation installation, metallurgical testing and process trade-off studies, hydrogeologic and surface-water testing, monitoring and characterization, geotechnical characterization for pit slope design, acid rock drainage studies and environmental monitoring activities and socioeconomic studies and community relations programs. Drilling at the Cangrejos Project was completed on September 12, 2019 which resulted in a decrease in expenditures compared to prior quarters as drill rigs were demobilized at that time. The Company continued work on its Cangrejos Project in the three months ended December 31, 2019 (the "Fourth Quarter"), notably including various studies to support an updated PEA as described earlier in this MD&A. E&E expense for the quarter ended December 31, 2019 was \$2,390,944, which was consistent with the quarter ended December 31, 2018 expenditure of \$2,343,532, and which was lower than the quarter ended September 30, 2019 when expenditures were \$4,051,329. The reduction from the prior quarter was the result of no drilling in the Fourth Quarter, which lowered expenses. This was partially offset, as in the prior year equivalent period, by higher fees, salaries and other employee benefits as a result of year end bonuses and share-based payment expense related to stock options granted in October 2019.

ADDITIONAL DISCLOSURE FOR VENTURE ISSUERS WITHOUT SIGNIFICANT REVENUE

Additional disclosure concerning the Company's expenses and mineral property costs is provided earlier in this MD&A and in Note 7 of the Company's audited consolidated financial statements for the years ended December 31, 2019 and 2018.

LIQUIDITY AND CAPITAL RESOURCES

As at December 31, 2019, the Company had cash of \$6,247,867 compared to cash of \$14,490,979 at December 31, 2018. The Company's working capital at December 31, 2019 was \$5,053,209 compared to \$14,056,845 at December 31, 2018. The Company's cash and current assets at December 31, 2019, were sufficient to meet the Company's current accounts payable, accrued liabilities and commitments.

Working capital is defined as current assets minus current liabilities. Working capital calculations or changes are not measures of financial performance, nor do they have standardized meanings, under IFRS. Readers are cautioned that this calculation may differ among companies and analysts and therefore may not be directly comparable. Management believes that disclosure of the Company's working capital is of value to assess the available capital resources of the Company at a reporting period end.

At December 31, 2019, approximately \$5.9 million of the Company's cash was held at Scotiabank, a major chartered bank in Canada, and approximately \$0.3 million was held at a bank in Ecuador. Management is not aware of any liquidity issues associated with any of the banks in which funds have been deposited.

The Company had no long-term debt obligations or off-balance sheet arrangements at December 31, 2019.

In order to keep its mineral concessions in Ecuador in good standing, the Company is required to meet certain spending commitments each year, which are communicated to the Government of Ecuador on an annual basis. In total, at December 31, 2019, the Company's commitments amounted to \$226,000 due within one year from December 31, 2019 (see Note 21 of the audited consolidated financial statements of the Company for the year ended December 31, 2019). The Company's current working capital is sufficient to meet these commitments.

To date, the capital requirements of the Company have been met by equity or loan proceeds. As noted in Note 2(c) to the audited consolidated financial statements of the Company for the year ended December 31, 2019, the Company has incurred cumulative losses of \$81,422,506 and will continue to incur losses in the development of its business. The Company's ability to continue as a going concern is dependent upon obtaining additional financing, entering into a joint venture, a merger or other business combination transaction involving a third party, sale of all or a portion of the Company's assets, the outright sale of the Company, the successful development of the Company's mineral property interests, or a combination thereof. As described earlier in this MD&A in the section "Financing Activity," the Company closed a private placement for gross proceeds of approximately CAD\$9 million in December 2019.

Subsequent to December 31, 2019, the COVID-19 outbreak was declared a pandemic by the World Health Organization. The situation is dynamic and the ultimate duration and magnitude of the impact on the economy, capital markets and the Company's financial position cannot be reasonably estimated at this time. The Company is monitoring developments and will adapt its business plans accordingly. The actual and threatened spread of COVID-19 globally could adversely impact the Company's ability to carry out its plans and raise capital. The ability to raise additional financing for future activities beyond those contemplated by the aforementioned financing activity may be impaired, or such financing may not be available on favourable terms, due to conditions beyond the control of the Company, such as uncertainty in the capital markets, depressed commodity prices or country risk factors. This exposure is discussed in more detail in the "Risks and Uncertainties" section of this MD&A. These factors indicate the existence of a material uncertainty that may cast significant doubt about the Company's ability to continue as a going concern.

FINANCIAL INSTRUMENTS

At December 31, 2019, the Company's financial instruments consist of cash, receivables, environmental deposit and accounts payable and accrued liabilities. Fair value estimates are made at the balance sheet date based on generally accepted pricing models, discounted cash flow analysis or using prices from observable current market transactions. These estimates are subjective in nature and may involve significant uncertainties in matters of judgment and, therefore, cannot be determined with precision. The fair values of the Company's financial instruments approximate their carrying values due to their short terms to maturity or capacity for prompt liquidation and the interest rates being charged or earned on these amounts.

The Company's financial instruments have been classified as follows under IFRS:

- Cash: amortized cost.
- Receivables: amortized cost.
- Environmental deposit: amortized cost.
- Accounts payable and accrued liabilities: amortized cost.

The types of financial risk exposure and the way in which such exposure is managed by the Company is as follows:

Credit Risk

It is management's opinion that the Company is not exposed to significant credit risk arising from these financial instruments, as disclosed in Note 16(a) to the audited consolidated financial statements for the year ended December 31, 2019.

The Company's exposure to credit risk on its cash is limited by maintaining this asset with high-credit quality financial institutions. The Company may be exposed to the credit risk of its banks in Ecuador which hold cash for the Company's Ecuadorian operations. The Company limits its exposure to this risk by maintaining minimal cash balances in Ecuador, normally sufficient to fund the next month's operations.

Liquidity Risk

Liquidity risk is the risk that the Company will be unable to meet its financial obligations as they become due. The Company manages liquidity risk by ensuring that it has sufficient cash and other financial resources available to meet its obligations. The Company typically forecasts cash flows for a period of twelve months to identify financial requirements. These requirements are met through a combination of cash on hand, disposition of assets, accessing capital markets and/or loan advances.

At December 31, 2019, the Company's current liabilities consisted of accounts payable and accrued liabilities of \$1,365,188 which are due primarily within the next quarter. The Company's cash of \$6,247,867 at December 31, 2019 was sufficient to pay the accounts payable and accrued liabilities.

Market Risks

The market risks to which the Company is exposed are interest rate risk and currency risk.

Interest Rate Risk

Interest rate risk is the risk that the future cash flows of the Company will fluctuate because of changes in market interest rates. Included in net loss for the year ended December 31, 2019 is interest income earned on the Company's cash. Based on the Company's cash at December 31, 2019, and assuming that all other variables remain constant, a 1% increase or decrease in interest rates would result in an increase or decrease to the Company's interest income of approximately \$63,000 (on an annualized basis).

Currency Risk

The functional currency of the Company and its subsidiaries is the U.S. dollar. The carrying amounts of monetary assets and liabilities denominated in currencies other than the U.S. dollar are subject to fluctuations in the underlying foreign currency exchange rates. Gains and losses on such items are included as a component of net loss for the period.

The Company is exposed to foreign exchange and currency risks arising from fluctuations in foreign exchange rates among the U.S. dollar and Canadian dollar and the degree of volatility of these rates. The Company has historically raised funds from equity financings primarily in U.S. dollars or in Canadian dollars of which the vast majority of the cash is converted to U.S. dollars upon conclusion of the financing. Canadian G&A expenses are primarily paid in Canadian dollars. The Company does not use derivative instruments to reduce its exposure to foreign exchange and currency risks.

At December 31, 2019, the Company's cash was primarily held in U.S. dollars with approximately \$0.7 million held in Canadian dollars as disclosed in Note 4 of the audited consolidated financial statements for the year ended December 31, 2019. The Company estimates that a 1% fluctuation in foreign currency exchange rates of the Canadian dollar compared to the U.S. dollar would have an impact of approximately \$7,000 to the results of operations based upon the foreign currency financial instruments (including cash) held at December 31, 2019.

SHARE CAPITAL

As at the date of this MD&A, the Company had the following securities issued and outstanding:

Common shares:	331,273,893	
Common share purchase options:	19,458,654	exercisable between CAD\$0.28 - CAD\$0.80 per option.

CRITICAL ACCOUNTING JUDGMENTS AND ESTIMATES

The preparation of financial statements in conformity with IFRS requires management to make certain judgments, estimates and assumptions that affect the reported amounts of assets, liabilities, income and expenses. The Company evaluates its estimates on an ongoing basis and bases them on various assumptions that are believed to be reasonable under the circumstances. The Company's estimates are used for making judgments about the carrying value of assets and liabilities that are not readily apparent from other sources. Actual results are likely to differ from these estimates. Should the Company be unable to meet its ongoing obligations, the realizable value of its assets may decline materially from current estimates.

The accounting policy estimates and judgments described below are considered by management to be essential to the understanding and reasoning used in the preparation of the Company's consolidated financial statements and the uncertainties that could have a bearing on its financial results. Further details, and a description of certain other areas of estimation and judgment, can be found at Note 3(t) in the Company's audited consolidated financial statements for the year ended December 31, 2019.

Going concern

The assessment of the Company's ability to continue as a going concern requires significant judgment. As disclosed in Note 2(c) of the audited consolidated financial statements for the year ended December 31, 2019, the Company has incurred cumulative losses of \$81,422,506. The ability of the Company to continue as a going concern is dependent upon obtaining additional financing, entering into a joint venture, a merger or other business combination transaction involving a third party, sale of all or a portion of the Company's assets, the outright sale of the Company, the successful development of the Company's mineral property interests or a combination thereof. Factors that the Company evaluates include forecasts, the ability to reduce expenditures if required, and indications of shareholder support.

Exploration and evaluation assets

The application of the Company's accounting policy for exploration and evaluation assets requires judgment in determining whether it is likely that costs incurred will be recovered through successful exploration and development or sale of the asset under review. Furthermore, the assessment as to whether economically recoverable mineral resources exist is itself an estimation process. Estimates and assumptions made may change if new information becomes available. If, after expenditure is capitalized, information becomes available suggesting that the recovery of expenditure is unlikely, the amount capitalized is written off to profit or loss in the period when the new information becomes available.

Fair value of net assets distributed to Luminex

The determination of the fair value of the net assets distributed to Luminex as part of the Arrangement in August 2018 required judgment and estimates. The Company utilized comparable market transactions to value the Condor Project and a replacement cost approach as an indicator of the value of exploration and evaluation assets where a mineral resource was yet to be determined.

Share-based payments

The Company utilizes the Black-Scholes Option Pricing Model ("Black-Scholes") to estimate the fair value of stock options granted to directors, officers and employees. The use of Black-Scholes requires management to make various estimates and assumptions that impact the value assigned to the stock options including the forecast future volatility of the stock price, the risk-free interest rate, dividend yield and the expected life of the stock options. Any changes in these assumptions could have a material impact on the share-based payment calculation value.

Right-of-use ("ROU") assets and lease obligations

The application of IFRS 16 (see additional details below) requires the Company to make certain judgments, estimates and assumptions that affect the valuation of ROU assets and the related lease obligations. These include determining agreements in the scope of IFRS 16, determining the contract term and the interest rate used for discounting of future cash flows. The lease term determined by the Company is comprised of the non-cancellable period of lease agreements and periods covered by an option to extend the lease if the Company is reasonably certain to exercise that option. The present value of the lease payment is determined using a discount rate representing the rate that would be applicable to the Company in the relevant jurisdiction of the lease agreement at the time the lease agreement commences or is modified.

CHANGES IN ACCOUNTING STANDARDS

The IASB, from time to time, issues new accounting standards that may impact the Company's future reported financial statements:

IFRS 16 – Leases

On January 13, 2016, the IASB published a new standard, IFRS 16, eliminating the dual accounting model for lessees, which distinguished between on-balance sheet finance leases and off-balance sheet operating leases. Under the new standard, a lease becomes an on-balance sheet liability that attracts interest, together with a new right-of-use asset. In addition, lessees recognize a front-loaded pattern of expense for most leases, even when cash rentals are constant. IFRS 16 is effective for annual periods beginning on or after January 1, 2019.

The Company has applied IFRS 16 using the modified retrospective approach from January 1, 2019, without restatement of comparative balances, and has elected to record the transition date right-of-use assets at amounts equal to the present value of the minimum lease payments, on a lease by lease basis. The Company elected not to recognize right-of-use assets and liabilities for short-term leases that have a term of 12 months or less and leases of low-value assets. Lease payments associated with these leases are recognized as an expense in the consolidated statement of comprehensive loss. The impact of adopting IFRS 16 on January 1, 2019, was to record a lease liability and right-of-use asset of \$109,822 associated with the leasing of office and warehouse space in Ecuador.

The following are the new accounting policies for right-of-use assets under IFRS 16.

Lease definition:

At inception of a contract, the Company assesses whether the contract is, or contains, a lease. A contract is, or contains, a lease if it conveys the right to control the use of an identified asset for a period of time in exchange for consideration. An identified asset may be implicitly or explicitly specified in a contract, but must be physically distinct, and must not have the ability for substitution by a lessor. The Company has the right to control an identified asset if it obtains substantially all of its economic benefits and either pre-determines or directs how and for what purpose the asset is used.

Measure of right-of-use assets and lease obligations:

At lease commencement, the Company recognizes a ROU asset and a lease obligation. The ROU asset is initially measured at cost, which comprises the initial amount of the lease obligation adjusted for any lease payments made at, or before, the commencement date, plus any initial direct costs incurred, less any lease incentives received.

The ROU asset is subsequently amortized on a straight-line basis over the shorter of the term of the lease, or the useful life of the asset determined on the same basis as the Company's property and equipment. The ROU asset is periodically reduced by impairment losses, if any, and adjusted for certain remeasurements of the lease obligation.

The lease obligation is initially measured at the present value of lease payments remaining at the lease commencement date, discounted at either the rate implicit in the lease or using the Company's incremental borrowing rate. Lease payments included in the measurement of the lease obligation, when applicable, may comprise fixed payments, variable payments that depend on an index or rate, amounts expected to be payable under a residual value guarantee and the exercise price under a purchase, extension or termination option that the Company is reasonably certain to exercise.

The lease obligation is subsequently measured at amortized cost using the effective interest method. It is remeasured when there is a change in future lease payments arising from a change in an index or rate, if there is a change in the Company's estimate of the amount expected to be payable under a residual value guarantee, or if the Company changes its assessment of whether it will exercise a purchase, extension or termination option. When the lease obligation is remeasured, a corresponding adjustment is made to the carrying amount of the ROU asset.

Recognition exemptions:

The Company has elected not to recognize ROU assets and lease obligations for short-term leases that have a lease term of twelve months or less or for leases of low-value assets. Payments associated with these leases are recognized as an operating expense on a straight-line basis over the lease term within costs and expenses on the consolidated statement of comprehensive loss.

RISKS AND UNCERTAINTIES

The Company's principal activity is mineral exploration and development. Companies in this industry are subject to many kinds of risks, including, but not limited to, operational, technical, environmental, labour, social, political, security, financial, economic, and metals pricing. Additionally, often due to factors that cannot be predicted or foreseen, few exploration projects successfully achieve development. While risk management cannot eliminate the impact of all potential risks, the Company strives to manage risks to the extent possible and practicable.

The risks and uncertainties described in this section are considered by management to be the most important in the context of the Company's business. The risks and uncertainties below are not listed in order of importance, nor are they inclusive of all the risks and uncertainties the Company may be subject to, and therefore other risks may apply.

- *The impact and risks arising from epidemic diseases, such as the recent outbreak of COVID-19 may have a significant impact on the Company.*

The impacts of the fast spreading Coronavirus disease (COVID-19) on the Company are unpredictable. The Company is conducting business as normal with modifications to personnel travel and work locations and is currently adapting work at the Cangrejos Project in response to the mandates of the Government of Ecuador, as well as concerns of local communities. Rules in all jurisdictions are changing rapidly and the Company will continue to evaluate and adapt to measures as they are announced. Government and local restrictions on the movement of people and goods may cause work and analysis performed by the Company and its contractors to slow or even cease. Ecuador is taking very aggressive measures to counter the spread of the virus, however, deteriorating conditions could force the Company to enact force majeure under its agreements or other contracts. Such disruptions in work may cause the Company to miss actual or self-imposed deadlines, push out earlier forecasts, and increase fiscal losses. In addition, the outbreak of COVID-19 has caused considerable disruption to the world economy and financial and metals markets which could have a materially adverse impact on the ability of the Company to raise additional funding in the future and could negatively impact, among other factors, the Company's share price.

- *Mineral exploration inherently involves a high degree of risk. All of the mineral property interests of the Company are in the exploration stage and, consequently, may not result in any commercial discoveries.*

Mineral exploration involves a high degree of risk. Few properties that are explored are ultimately developed into producing mines. The property interests owned by the Company are in the exploration stage only, are without known bodies of commercial mineralization and the Company has no ongoing mining production at any of them. The Company's mineral exploration activities may not result in any discoveries of commercial bodies of mineralization. If the Company's efforts do not result in any discovery of commercial mineralization, the Company will be forced to look for other exploration projects or cease operations. As well, the exploration and development activities of the Company may be disrupted by a variety of risks and hazards, which may be beyond the control of the Company. These risks include, but are not limited to, social and political strife, litigation, labour stoppages, the inability to obtain adequate power, water, and labour, including consultants or other experts, as well as suitable machinery and equipment. In addition, the Company may be unable to acquire or obtain such necessities as water and surface rights, which may be critical for the continued advancement of exploration and development activities on its mineral property rights.

- *Government expropriation may result in the total loss of the Company's mineral property interests.*

Even if the Company's mineral property interests are proven to host economic mineral resources, governmental expropriation may result in the total loss of the Company's mineral property interests without any compensation to the Company. Similarly, expropriation or shutdown of financial institutions or other entities the Company does business with could impact operations. Further, expropriation of other businesses, in mining or other industries, could impact the Company's ability to operate and obtain financing, as well as its strategic options. Finally, expropriation need not be outright. There are many forms of creeping expropriation, through taxation and other mechanisms, that if applied could negatively impact the company's operations and prospects.

- *The Cangrejos Project is the Company's sole material property.*

The Cangrejos Project is the Company's sole material property. Actual development costs may differ materially from the Company's estimates and may render the development of the Cangrejos Project economically unfeasible. The Company is largely dependent upon the Cangrejos Project for future revenue and profits, if any. Should the development of the Cangrejos Project not be possible or practicable for political, social, engineering, technical, environmental or economic reasons, then the Company's business and financial position will be significantly and adversely affected.

If the Company discovers a potentially economic mineral resource or mineral reserve at the Cangrejos Project, there is no assurance that the Company will be able to monetize the asset by developing a mine thereon, or otherwise commercially exploiting such mineral resource or mineral reserve, which could materially adversely affect the Company's financial condition and prospects.

- *Governmental regulation may have negative impacts on the Company.*

The Company's assets and activities are subject to extensive Canadian and Ecuadorian federal, state, provincial, territorial and local laws and regulations governing various matters, including, but not limited to:

- land access, use and ownership;
- water use;
- environmental protection;
- land use designations;
- social consultation and public referendums;
- corporate social responsibility;
- management and use of toxic substances and explosives;
- rights over and management of natural resources, including minerals and water;
- prospection, exploration, development and construction of mines, production and reclamation;
- exports and imports;
- taxation;
- mining royalties;
- restrictions on the movement of capital into and out of Ecuador (which could impact the Company's ability to repatriate funds and therefore, pay dividends);
- importation of equipment and goods;
- transportation;
- hiring practices and labour standards by companies and contractors, as well as occupational health and safety, including mine safety;
- reporting requirements related to investment, social and environmental impacts, health and safety, and other matters;
- processes for preventing, controlling or halting artisanal or illegal mining activities;
- historic and cultural preservation; and,
- restrictions and requirements related to responses to COVID-19 virus.

The costs associated with legal and regulatory compliance are substantial, and future laws and regulations, changes to existing laws and regulations, or more stringent or modified application and enforcement of current laws and regulations by governmental or judicial authorities could generate additional expenses, capital expenditures, delays in the development of the Company's properties, and even restrictions on or suspensions of Company operations. Moreover, laws and regulations could allow governmental authorities and private parties to bring complaints or lawsuits against the Company based upon alleged damage to property and/or injury to persons resulting from the environmental, health and safety impacts of the Company's past and current operations, or possibly even actions or inaction by third parties, including those from whom the Company acquired its properties, and could lead to the imposition of substantial financial judgments, fines, penalties or other civil or criminal sanctions.

It is a challenge to comply strictly with all of the norms that apply to the Company. The Company retains competent and trained staff, professionals, attorneys, advisors and consultants in the different jurisdictions in which it does business; however, there is no certainty that both it and its contractors will continuously be compliant with all applicable laws and regulations. The failure to comply with all applicable norms could lead to financial restatements, fines, penalties and other material negative impacts on the Company.

- *Failure to comply fully with applicable mining laws, regulations and local practices may have a material adverse impact on the Company's operations or business.*

While the Company seeks to comply fully with applicable laws, regulations and local practices, failure of the Company or government officials to comply fully with applicable laws, regulations and local practices, including those relating to mineral rights applications and tenure, could result in loss, reduction, cancellation or expropriation of entitlements, or the imposition of local or foreign parties as joint venture partners with carried or other interests. Any such loss, reduction or imposition of partners could have a material adverse impact on the Company's operations or business. Furthermore, unreasonableness, increasing complexity or novel judicial or regulatory interpretations of mining laws and regulations on the part of the Company and / or its legal advisors or of Government of Ecuador officials may render the Company incapable of strict compliance.

- *The exploration and the development of the Company's property interests are subject to extensive laws and regulations governing health, safety, environment and communities.*

The Company's exploration and development activities are subject to extensive laws and regulations governing the protection of the environment, waste management and disposal, worker and community safety, employee health, mine development, water, preservation of archaeological remains and endangered and protected species, as well as extensive reporting and community engagement requirements, and more. The Company's ability to obtain permits and other approvals and to successfully operate in particular locations may be adversely impacted by real or perceived detrimental events associated with the Company's activities or those of other mining companies or associations, or even artisanal or illegal miners, affecting the environment, water, wildlife, human health, or the safety of nearby communities, both within and outside of Ecuador. Delays in obtaining or failure to secure government permits and approvals, or to secure evictions of illegal miners or other invaders, may adversely affect the Company's ability to access, explore or develop its properties. The Company has made, and expects to make in the future, significant expenditures to comply with laws and regulations and to the extent reasonably possible, generate social and economic benefit in nearby communities. On occasion, areas of the Company's mineral properties are occupied by illegal miners, and these incidents are reported and dealt with by the Company using procedures available to it under Ecuadorian law. The Company, however, may be required to remediate areas on its concessions impacted by its own activities or those of third parties. Future changes to environmental laws, regulations and permitting processes or changes in their enforcement or regulatory interpretation could have an adverse impact on the Company's operating and financial condition.

- *The Company's ability to operate on its concessions depends on its ability to obtain and maintain social licenses.*

The Company's concessions are in close proximity to and, in limited areas, overlap with local communities, and it often needs local approvals in order to access and operate in these areas. The Company often enters into agreements with local communities, groups or individuals that address surface access, road or trail usage, local employment, social investment and other key issues. The ethnic composition, social organization and landownership structure of the communities may differ on a case by case basis, as may the Company's exploration requirements and impacts. Similarly, local concerns regarding environmental and social impacts, both current and historic, including pressures and worries related to the activities of illegal miners and other formal miners in the vicinity of the project, as well as expectations related to Company employment, social investment programs and other benefits tend to vary from place to place. Every local stakeholder relationship, however, requires ongoing dialogue and relationship management. For these purposes, the Company has assembled a Community Relations team, which is led by experienced professionals and, when necessary, supported by expert consultants, who develop and execute social communications strategies and implementation plans aimed at creating sustainable and enduring relationships based on collaboration, shared interests and trust. Events do not always unfold as intended or according to plan, however, and the status of relations can deteriorate for any number of reasons, including, but not limited to: influences of local or external political or social actors or organizations, shifts in the agendas or interests of individuals or the community as a whole, the Company's inability to deliver on community expectations or its commitments, or concerns stemming from communities' historic or recent experiences with legal and/or illegal miners. The Community Relations team is prepared to manage such situations and issues are usually resolved through dialogue within a reasonable timeframe. However, if under extreme circumstances the Company were to lose its social license with one or more communities and be unable to recover it, this could impact the viability of the project. By the same token, if the Company is unable to obtain social licenses from some communities, some of its activities could be affected.

Additionally, in recent years, local political and social groups and organizations, including indigenous confederations, at times funded at least in part by international nongovernmental organizations, have increased their activities against extractive industries in many jurisdictions, including Ecuador. Activists have taken such actions as road closures and work stoppages, as well as succeeded in attracting the attention of different local and national media outlets, at times negatively impacting the reputations of the mining sector and/or specific companies. Last year, anti-mining activists in Ecuador succeeded in bringing about a public vote on mining activity in a canton in the highlands near a significant mining project; however subsequent efforts to promote similar votes at cantons near a major project and in all of Azuay Province have been denied by the Constitutional Court. Activists have also brought claims before the courts seeking to constitutionally enjoin mining companies from advancing projects until the Government of Ecuador complies with its commitments under article 57 of the Constitution of the Republic of Ecuador and the ILO convention, which requires free, prior and informed consultation to aboriginal or indigenous communities. While it is the Company's understanding that there are no aboriginal or indigenous communities in the area of the Cangrejos Project, such initiatives can not be entirely ruled out and, if pursued, may have a material adverse effect on the Company's operations at the Cangrejos Project and on its financial position, cash flows and results of operations.

- *The Company's properties are subject to pressure from artisanal and illegal miners.*

The Company's concessions are located close to communities with long-standing alluvial, often illegal, mining traditions. Limited economic opportunities in these areas contribute to making gold mining an attractive field of work for local individuals and small associations and companies, who at times view areas in the Company's concessions as attractive targets for alluvial or hard rock mining. In some cases, the local operators (occasionally financed by outsiders), having exhausted development opportunities at their current location may seek to expand or relocate their activities into areas controlled by the Company. In other instances, illegal miners may relocate to one of the Company's concession areas in response to government pressure that has shut down their prior operations in a different part of the country. Local and national political and regulatory authorities may come under pressure to support or not impede the ambitions of these local actors. The Company monitors local mining activities and is in regular contact with regulatory and political authorities to anticipate and manage issues as they arise, however not every incursion can be readily identified, let alone terminated. Furthermore, there is a risk that in the future, due to political or social factors, regulators may take decisions to grant access to artisanal miners that impact the viability of the Company's project.

- *The Company may not be able to obtain or renew permits that are necessary for its operations.*

In the ordinary course of business, the Company is required to obtain new governmental permits as well as renew permits for exploration and development activities and any ultimate development, construction and commencement of mining operations. Obtaining or renewing necessary permits can be a complex and time-consuming process, which at times may involve several political jurisdictions and different government agencies that may not have the expertise, resources or political disposition needed for efficient and timely processing, and, may require public hearings and costly undertakings on the Company's part. The duration and success of the Company's efforts to obtain and renew permits are contingent upon many variables not within its control, including leadership and policy changes at the regulator, the interpretation of applicable requirements implemented by permitting authorities, the expertise and diligence of civil servants, challenges presented by social and political actors, and the timeframes for agency decisions. The Company may not be able to obtain or renew permits that are necessary to its operations, or the cost to obtain or renew permits may exceed what the Company believes it can recover from a given property once in production. Any unexpected delays or costs associated with the permitting process could slow exploration and/or development or impede the eventual operation of a mine, which could adversely impact the Company's operations, share price, ability to finance and, ultimately, eventual profitability.

- *The Company has no significant source of operating cash flow and failure to generate revenues in the future could cause it to go out of business.*

The Company has no revenues from ongoing operations and has recorded significant accumulated losses. Based upon current plans, the Company expects to incur operating losses in future periods due to ongoing expenses associated with the holding, exploration and development of the Company's mineral property interests. The Company will likely continue to have limited financial resources and its ability to achieve and maintain profitability and positive cash flow will remain dependent upon the Company being able to:

- develop and/or locate a profitable mineral property;
- generate revenues in excess of expenditures; and,
- minimize exploration and administrative costs in the event revenues and/or financing availability are insufficient, in order to preserve available cash.

In order to stay in business, in the absence of cash flow from operations, the Company will have to raise funding through financing activities. However, in the event it needs to do so, there is no certainty the Company will be able to raise funds at all or on terms acceptable to the Company. Furthermore, additional funds raised by the Company through the issuance of equity or convertible debt securities would cause the Company's current shareholders to experience dilution. Such securities also may grant rights, preferences or privileges senior to those of the Company's common shareholders.

The Company does not have any contractual restrictions on its ability to incur debt and, accordingly, the Company could incur significant amounts of indebtedness to finance its operations. Any such indebtedness could contain restrictive covenants, which likely would restrict the Company's operations.

- *The mineral exploration industry is intensely competitive in all its phases.*

The Company competes with many companies, including those possessing greater financial resources and technical capabilities, for the acquisition of mineral concessions, claims, leases, other mineral interests, and equipment required to conduct its activities as well as for the recruitment and retention of qualified employees, and contracting of attorneys, consultants and technical experts. Ecuador is an emerging mining country with two large mines that only just commenced production in November 2019 and as a result mining expertise is limited and competition for qualified nationals is particularly intense.

- *Even if the Company makes a discovery of commercial quantities of minerals, there is no assurance that there will be market demand for the mineral resource and that the investment will earn an adequate return.*

There is no assurance that even if commercial quantities of minerals are discovered, a ready market will exist for their sale. Factors beyond the control of the Company may affect the marketability of any minerals discovered. These factors include: market fluctuations; domestic and international economic trends and political events; inflation or deflation; currency exchange fluctuations (specifically, the U.S. dollar relative to other currencies); interest rates and global or regional consumption patterns; speculative activities; and, government laws and regulations, including those relating to prices, taxes, royalties, land tenure, land use, labour, importing of equipment, importing and exporting of minerals, and environmental protection. The exact effect of any of these factors cannot be accurately predicted, but a combination of them may result in the Company not receiving an adequate return on invested capital or losing its invested capital.

- *Substantial expenditures are required to be made by the Company to establish mineral reserves and the Company may either not discover minerals in sufficient quantities or grades or not be able to obtain the required funds to develop a project on a timely basis.*

Substantial expenditures are required to establish mineral reserves through drilling and the estimation of mineral reserves or mineral resources in accordance with the Canadian Institute of Mining, Metallurgy and Petroleum (CIM) Standards and Guidelines for Resources and Reserves. Although significant benefits may be derived from the discovery of a major mineralized deposit, the Company may not discover minerals in sufficient quantities or grades to justify a commercial mining operation and the funds required for development may not be obtained on a timely basis or may not be obtainable on terms acceptable to the Company. Estimates of mineral reserves and mineral resources can also be affected by environmental factors, unforeseen technical difficulties and unusual or unexpected geological formations. In addition, the grades of minerals ultimately mined may differ from those indicated by drilling results. Material changes in mineral reserve or mineral resource estimates, grades, stripping ratios or recovery rates may affect the economic viability of any project.

- *Risks relating to inaccurate estimates of mineral resources, production, purchases, costs, decommissioning or reclamation expenses.*

Unless otherwise indicated, mineralization figures presented by the Company in filings with securities regulatory authorities, press releases and other public statements that may be made from time to time, are based upon estimates made by Company personnel and independent geologists. These estimates are inherently imprecise, as they depend upon geological interpretation and statistical inferences drawn from drilling and sampling analysis, which may prove to be unreliable. As a result, there can be no assurance that mineral resource or other mineralization figures or estimates of costs (including initial capital costs and initial capital intensity) and expenses will be accurate, nor that the mineral resource could be mined or processed profitably.

The Company has not commenced production at any of its properties, nor defined or delineated any proven or probable mineral reserves. Therefore, the mineralization estimates for the Company's properties may require adjustments or downward revisions based upon further exploration or development work or actual production experience. In addition, the grade of ore ultimately mined, if any, may differ from that indicated by and inferred from drilling results. Furthermore, there can be no assurance that minerals recovered in small-scale tests will be duplicated in large-scale tests under on-site conditions or at production scale. As a result, the mineral resource and mineral reserve estimates that may be contained in the Company's filings with securities regulatory authorities, press releases and other public statements that may be made from time to time have been determined and valued based on assumed future prices, cut-off grades and operating costs that may prove to be inaccurate. In addition, extended declines in market prices for gold or other metals may render portions of the Company's mineralization uneconomic and result in reduced reported mineralization.

The estimated parameters for the Company's projects may be changed as development and mining plans are generated and refined. These parameters would include estimates of how plants, equipment and processes may operate in the future at the Company's projects, for which cost and productivity estimates may prove to be incorrect.

Any material alteration in the above noted estimates, or of the Company's ability to extract mineralization from its projects, could have a material adverse effect on the Company's results or financial condition.

- *The inherent operational risks associated with mining, exploration and development, many of which are beyond the Company's control.*

The Company's activities are subject to a high degree of risk due to factors that, in some cases, cannot be foreseen or anticipated, or controlled. These risks include, but are not limited to: tectonic or weather activity that may provoke landslides, damage infrastructure or other impacts; labour disruptions; health emergencies; local political or social pressure; legislative and regulatory changes; crime, including corruption; the inability to obtain adequate sources of power, water, labour, suitable or adequate machinery and equipment, and service providers, including drilling, engineering and environmental contractors, as well as expert attorneys and consultants. In addition, the Company may be unable to acquire or obtain such requirements as water rights, easements and other surface rights, which may be critical for the continued advancement of exploration, development and operational activities on its mineral concessions. Furthermore, the Company is currently involved in a number of regulatory and legal processes where, in spite of its best efforts and those of its legal advisors and consultants, results are uncertain. These processes could generate delays and adverse decisions, which could negatively impact project development and the Company's prospects.

- *Inadequate infrastructure and resources may adversely affect the Company's operations and profitability.*

Mining, development, exploration and production activities depend, to one degree or another, on adequate infrastructure and services. Reliable roads, bridges, power and fuel sources, as well as water supplies are important determinants that affect capital, as well as operating costs and safety. The lack of availability on acceptable terms or the delay in the availability of any one or more of these items could prevent or delay development of the Company's projects. If adequate infrastructure is not accessible or implementable, there can be no assurance that the development of the Company's project will commence or be completed on a timely basis, if at all. In addition, unusual or infrequent weather phenomena, tectonic activity, sabotage, government, social or other interference in the maintenance or provision of such infrastructure could adversely affect the Company's operations and profitability.

- *The Company currently has limited insurance covering its assets and operations and, as a consequence, could incur considerable costs.*

Mineral exploration involves risks, which, even with a combination of experience, knowledge and careful evaluation, mining exploration companies may not be able to overcome. Operations in which the Company has a direct or indirect interest may be subject to all the hazards and risks normally incidental to exploration of precious and non-precious metals, any of which could result in work stoppages, damage to property, and possible environmental damage. The Company presently has very limited commercial liability insurance and does not intend to increase its liability insurance. As a result of having limited liability insurance, the Company could incur significant costs that may have a materially adverse effect upon its financial condition and even cause the Company to cease operations.

- *The Company's mineral property interests or surface property may be subject to prior unregistered agreements or transfers and therefore title to some of the Company's property interests may be affected.*

Although the Company has sought and received such representations as it has been able to achieve from vendors in connection with the acquisition of, or options to acquire, an interest in its mining properties and surface rights, and has conducted limited investigations of legal title to each such property, the properties in which the Company has an interest may be subject to prior unregistered agreements or transfers or native land claims, or it is possible that title may be affected by undetected defects.

- *The prices of gold, copper, and other base and precious metals can fluctuate significantly over time, as well as experience periods of major volatility, which may adversely affect the economic viability of the Company's mineral assets.*

The Company's revenues, if any, are expected to be almost entirely derived from the mining and sale of gold, copper and other metals. The prices of those commodities have fluctuated widely, particularly in recent years (even months), and are affected by numerous factors beyond the Company's control, including: international economic and political events and trends; expectations about economic growth and inflation; currency exchange fluctuations; interest rates; consumption patterns; speculative activities; and, increased production due to new mine developments and improved mining and production methods. The effect of these factors on the price of gold and copper, as well as other precious and base metals, and, therefore, on the economic viability of the Company's mining project, cannot be accurately predicted, but nonetheless may adversely impact the Company's ability to raise capital and conduct its planned operations.

- *The Company's subsidiary and mineral properties are in a foreign country and, therefore, a large portion of the Company's business may be exposed to political, economic, social, security, and other risks and uncertainties.*

The Company's mineral property, and related subsidiary, is located in Ecuador. It may, therefore, be exposed to various types and degrees of security, economic, labour, political, social and other risks and uncertainties. These risks and uncertainties include, but are not limited to: illness; terrorism; hostage taking; military repression; high rates of inflation; labour unrest; war or civil unrest; local political and/or social opposition to mining; creeping or outright expropriation and nationalization; renegotiation or nullification of existing concessions, licenses, permits and contracts, including by way of invalidation of governmental acts; artisanal and illegal mining operations and the Government of Ecuador's enforcement of norms restricting these activities; changes in taxation and mining-related laws and regulations; trade protectionism, including restrictions or tariffs on imports; changes to the foreign exchange regime; changes to the currency regime; currency controls; restrictions on repatriation of funds; changing political conditions, including electoral results and political appointments; government austerity and other measures impacting the political will and operational capability of ministries, agencies and other government entities;; challenges to the validity of governmental acts; litigation and judicial decisions, including approval of processes for popular votes to ban mining in different jurisdictions, that run counter to the Government of Ecuador's pro-mining policies, possibly precipitated by activists or indigenous groups opposed to extractive industries and/or foreign investment; corrupt or unethical behaviour by government officials or agents, judges, and even Company employees; and, governmental regulations that may favour or require the awarding of contracts to local contractors or require foreign contractors to employ residents of, or purchase supplies from, a particular jurisdiction. The reputation of Ecuador as a developing nation, perceived by many as having a track record of political instability and measures contrary to attracting investment in the mining sector and other areas of the economy, may make it more difficult for the Company to obtain any required exploration and development financing for its projects.

Changes in mining or investment policies or shifts in political and public attitudes in Ecuador, its provinces, or local political jurisdictions, may adversely affect the Company's operations or potential profitability. Operations may be affected in varying degrees by modifications to government legislation and regulations with respect to, but not limited to: restrictions on production; price controls; export controls; currency remittances; taxes, including income taxes, property taxes, value added taxes, capital gains taxes, windfall taxes, and the sovereign adjustment tax; royalties; expropriation of property; foreign investment; maintenance of claims; the environment; land use, including territorial bans on different types of mining activities; land claims or other demands by local people; social consultation and other permitting requirements; artisanal and illegal mining operations; labour; transportation; water use; imports and exports; and, mine safety. Failure to comply strictly with applicable laws, regulations and local practices relating to mineral rights applications and tenure, could result in loss, reduction or expropriation of entitlements, or the imposition of additional local or foreign parties as joint venture partners with carried or other interests.

The impact of one or more of these various factors and uncertainties, none of which can be accurately predicted, could have an adverse effect on the Company's operations or potential profitability.

- *The Company's foreign subsidiary operations may impact its ability to fund operations efficiently, as well as the Company's valuation and stock price.*

The Company conducts operations through foreign subsidiaries and substantially all of its assets are held in such entities. Accordingly, any limitation on the transfer of cash or other assets between the parent corporation and such entities, or among such entities, could restrict the Company's ability to fund its operations efficiently. Any such limitations, or the perception that such limitations may exist now or in the future, could have an adverse impact on the Company's valuation and stock price.

- *The value of the Company's common shares, as well as its ability to raise equity capital, may be impacted by future issuances of shares.*

The Company is authorized to issue an unlimited number of common shares without par value. The Company may issue more common shares in the future. Sales of substantial amounts of common shares (including shares issuable upon the exercise of stock options), or the perception that such sales could occur, could materially adversely affect prevailing market prices for the common shares and the ability of the Company to raise equity capital in the future.

- *The Company's future performance is dependent on key personnel. The temporary or permanent loss of the services of any of the Company's and its subsidiary's executives or directors could have a material adverse effect on the Company's business.*

The Company's performance is substantially dependent on the performance and continued efforts of the Company's executives and its board of directors. The loss of the services of any of the Company's executives or directors could have a material adverse effect on the Company business, results of operations and financial condition. The Company currently does not carry any key person insurance on any of its executives or directors. The Company has limited resources and is currently unable to compete with larger organizations with respect to compensation and perquisites.

- *The Company is exposed to financial risk arising from fluctuations in the exchange rates between the U.S. dollar and Canadian dollar.*

While the Company and its subsidiaries incur the majority of their expenditures in U.S. dollars, corporate G&A expenses are primarily paid in Canadian dollars. Thus, the Company is exposed to financial risk arising from fluctuations in the exchange rates between the U.S. dollar and Canadian dollar, and the degree of volatility of these rates. The Company does not use derivative instruments to reduce its exposure to foreign currency risks.
