**Lumina Gold Announces First Corridor Zone Drill Results;
Discovers High Grade Breccia and Massive Sulphide**

Highlights:

Corridor Zone – Between Gran Bestia Deposit and Cangrejos Deposit

- C19-117: 8 metres of 14.70 g/t gold and 0.02% copper and 8 metres of 4.70 g/t gold and 0.23% copper
- C19-121: 4 metres of semi-massive sulphide material grading 5.98 g/t gold and 3.04% copper

Cangrejos Deposit

- C19-122: 132 metres of 0.97 g/t gold and 0.08% copper from surface
- C19-119: 90 metres of 0.73 g/t gold and 0.01% copper from surface

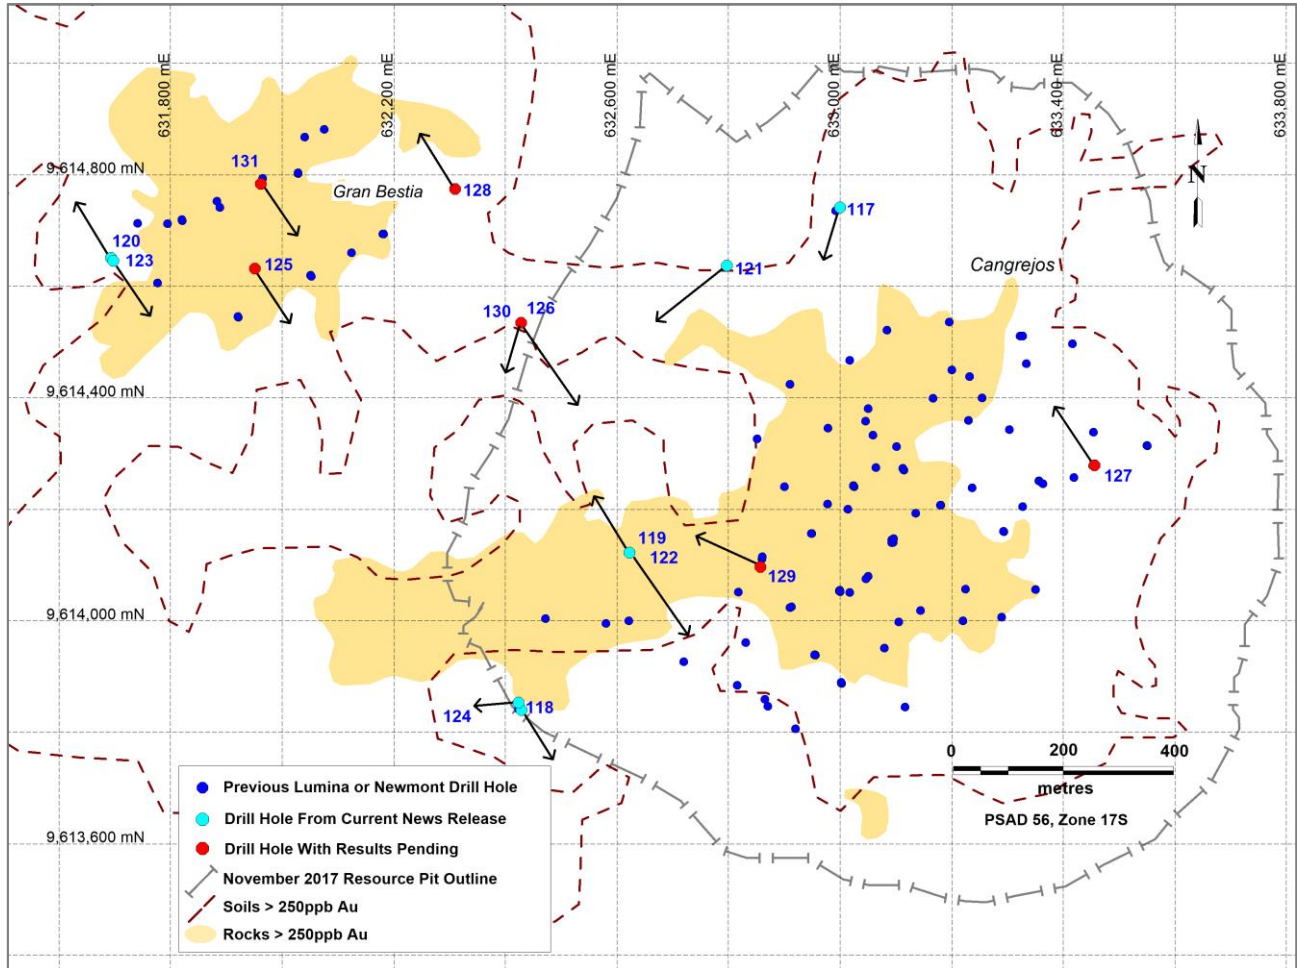

Vancouver, British Columbia - Lumina Gold Corp. (TSXV: LUM) (OTCQX: LMGDF) (the “Company” or “Lumina”) is pleased to announce additional drill results from the Cangrejos and Gran Bestia resource infill, step-out and depth extension program. These eight holes (C19-117 to C19-124) represent approximately 3,680 metres of drilling. The results include two holes from the Gran Bestia Deposit and four from the Cangrejos Deposit. In addition, two holes have now been drilled in the unexplored “Corridor” between Cangrejos and Gran Bestia to search for any continuity across the narrow zone separating the two deposits.

C19-117 and 121, the first holes to test for continuity between the deposits, both returned significant mineralization albeit of different styles. Hole 117 cut two high-grade 8-metre wide intercepts associated with strongly altered zones, grading 14.7 g/t gold and 4.7 g/t gold respectively. C19-121 cut extensive low-grade mineralization in the 0.3 to 0.5 g/t gold range over an aggregate 280 metres. C19-121 also cut at depth semi-massive chalcopyrite and pyrrhotite hosted in breccia grading 5.98 g/t gold and 3.04% copper over a 4-metre interval. These initial results suggest continuity may exist between the deposits. Exploration of the Corridor is continuing.

Two holes, C19-119 and C19-122 drilled from the same pad, but in opposite directions at Cangrejos both cut significant at-surface intervals of good grade in the north-central portion of the deposit. These holes merit follow-up exploration in the Corridor area to determine if this area could be suitable for mining in early years of a future mine plan.

Recently completed step-out holes drilled to the southwest at both deposits leave mineralization open in that direction. Holes C19-120 and 123 were collared from the same pad and drilled in opposite directions from the southwestern-most pad at Gran Bestia cut long intervals of mineralization. Holes from the southwestern-most pad at Cangrejos (C19-118 and 124, along with previously reported C19-114) also hit significant, long intervals of mineralization. Rock and soil gold geochemistry suggest mineralization could extend more than a kilometre to the southwest of current drilling on the Cangrejos deposit.

Drill Hole Location Map

Drill Intercept Summary

Hole Number	Deposit	From (m)	To (m)	Interval (m)	Au Grade (g/t)	Cu Grade (%)	Azimuth (°)	Dip (°)	Type
C19-117	Corridor	94	102	8	14.70	0.02	190	-60	Step-out
And		182	190	8	4.70	0.20			
And		300	320	20	0.33	0.16			
And		334	400	66	0.26	0.11			
C19-118	Cangrejos	100	174	74	0.47	0.05	150	-45	Step-out
And		188	306	118	0.36	0.04			
C19-119	Cangrejos	0	90	90	0.73	0.01	330	-61	Step-out
Incl		20	60	40	1.05	0.02			
And		106	180	74	0.66	0.09			
And		266	352	86	0.64	0.18			
Incl		298	344	46	0.80	0.25			

C19-120	Gran Bestia	44	70	26	0.24	0.07	330	-45	Step-out
And		82	102	20	0.30	0.12			
And		200	292	92	0.25	0.06			
And		304	320	16	0.37	0.10			
And		338	350	12	0.48	0.08			
And		430	468	38	0.28	0.01

C19-121	Corridor	24	42	18	0.27	0.04	240	-46	Step-out
And		66	84	18	0.38	0.09			
And		104	148	44	0.34	0.04			
And		196	236	40	0.31	0.04			
And		272	338	66	0.26	0.03			
And		378	422	44	0.76	0.34			
Incl		380	384	4	5.98	3.04			
And		444	454	10	0.49	0.05			
And		476	512	36	0.38	0.05			
C19-122	Cangrejos	0	132	132	0.98	0.08	150	-45	In-Fill
And		266	292	26	0.21	0.06			
And		334	500	166	0.36	0.1			
C19-123	Gran Bestia	8	24	16	0.32	0.07	150	-45	Step-out
And		38	52	14	0.25	0.07			
And		70	216	146	0.36	0.08			
And		242	284	42	0.26	0.08			
C19-124	Cangrejos	46	100	54	0.35	0.05	273	-45	Step-out
And		114	124	10	0.59	0.29			
And		136	378	242	0.30	0.06			

Note: Intervals in the reported holes are calculated using a cut-off of 0.2 g/t Au with maximum internal dilution of ten continuous metres. Sampling is done in consistent, continuous 2-metre intervals. The highest gold value used in the reported weighted averages is 38 g/t Au. Above cut-off intervals of less than 10 m are typically not reported except for distinct intercepts or rare, massive sulphide. In addition to the above results there were multiple intercepts of lower-grade material in the drill holes.

Quality Assurance

All Lumina sample assay results have been independently monitored through a quality control / quality assurance ("QA/QC") program including the insertion of blind standards, blanks and pulp and reject duplicate samples. Logging and sampling are completed at Lumina's secure facility located at the Cangrejos Project. Drill core is sawn in half on site and half drill-core samples are securely transported to ALS Lab's sample preparation facility in Quito, Ecuador. Sample pulps are sent to Lima, Peru for analysis. Gold content is determined by fire assay of a 30 gram charge with total copper content determined by four-acid digestion with ICP finish. ALS Labs is independent from Lumina.

Lumina is not aware of any drilling, sampling, recovery or other factors that could materially affect the accuracy or reliability of the data referred to herein.

Qualified Persons

Leo Hathaway, P.Geo., Senior Vice President of Lumina and the Qualified Person as defined by National Instrument 43-101 *Standards of Disclosure for Mineral Projects* for the Cangrejos Project has reviewed, verified and approved the contents of this news release.

About Lumina Gold

Lumina Gold Corp. (TSXV: LUM) is a Vancouver, Canada based precious and base metals exploration and development company focused on the Cangrejos Gold-Copper Project located in El Oro Province, southwest Ecuador. Lumina has an experienced management team with a successful track record of advancing and monetizing exploration projects.

Further details are available on the Company's website at <https://luminagold.com/>.
